

THE AI SECURITY CHECKLIST

20 checks to protect yourself, your family, and your business from AI-powered attacks | 2026 Edition

THEZARA AI

By Jax Scott – Army Special Forces veteran, AI security consultant. Host of TheZaraAI on YouTube.

PROTECT YOUR FAMILY (deepfakes & voice cloning)

- ☐ **Set a safe word with your family.** If a caller can't say it, hang up – no exceptions.
- ☐ **Verify by callback.** Never confirm identity on the incoming call – call back on a saved number.
- ☐ **Use a default robotic voicemail greeting.** A custom greeting is a free voice sample for cloning tools.
- ☐ **Treat urgency as a red flag.** "Urgent + secret + money" is the scam formula, human or AI.
- ☐ **Audit your social media privacy.** Lock down who can see videos of you and your kids (voice + face sources).

SPOT THE FAKE (before you trust any call or video)

- ☐ **Ask video callers to turn their head sideways.** Deepfakes still glitch at profile angles.
- ☐ **Ask one question only the real person could answer** (a childhood memory, an inside joke). AI can't know it.
- ☐ **Listen for the "too clean" audio.** Cloned voices often have flat emotion, odd pacing, no background noise.
- ☐ **Verify any money request on a second channel.** A "CFO" on Zoom approving a wire is how one company lost \$25M.
- ☐ **Know the payment red flags.** Banks, the IRS, and police never demand gift cards, crypto, or wire transfers.

LOCK DOWN YOUR AI TOOLS (stop leaking your own data)

- ☐ **Turn off training on your chats.** In ChatGPT: Settings > Data Controls > turn OFF "Improve the model".
- ☐ **Never paste sensitive data into free AI tools.** Client contracts, health data, credentials, anything under NDA.
- ☐ **Treat AI chat history like email.** Delete chat history you no longer need; it's discoverable data.
- ☐ **Be careful what your AI agents can access.** Prompt injection can turn your AI browser/agent against you.
- ☐ **Upgrade your logins.** Use a password manager + passkeys; AI makes password guessing cheap.

FOR YOUR BUSINESS

The five checks that stop "Shadow AI" from becoming your next breach headline

THEZARA AI
thezaraai.com

SHADOW AI & THE ENTERPRISE

- ☐ **Inventory the AI tools your staff actually uses.** 80% of staff already use unsanctioned AI tools.
- ☐ **Publish a usable AI acceptable-use policy.** Bans fail – offer a sanctioned tool plus clear rules.
- ☐ **Deepfake-proof your payment approvals.** Add a verbal code or callback rule for any wire/payment change request.
- ☐ **Vet your AI agents' credentials and access.** Treat agents like new hires: least privilege, logged.
- ☐ **Add AI incidents to your response plan.** Who do employees call when they suspect a deepfake or AI-driven fraud?

YOUR SCORE

17-20 checked: You're ahead of 95% of people. Stay sharp.

10-16 checked: You have real gaps. Start with the safe word and payment verification.

0-9 checked: You are the target profile attackers look for. Fix the top items this week.

Business under 16? That's exactly what an AI Security Assessment fixes.

KEEP LEARNING – 3 minutes at a time.

New AI-security breakdowns every Monday, Wednesday, and Friday, in plain English:
